Our **fork cable lugs** are made from the purest OFC-copper. The acoustic advantages are described in the chapter on pole terminals. Even large cable cross-sections can be processed. Because soft copper is unsuitable for the use of threads, we have decided to use a soldered connection between the lug and the cable.

Our **banana plugs** are manufactured using a special beryllium copper sheet and subsequently gold plated. The beryllium gives the copper the necessary spring tension that is needed in order to ensure a high contact pressure when in contact with a socket and therefore guaranteeing security. The acoustic advantages of copper remain largely unaffected.

**Technical specifications:**

Stackable terminals with receptacles for setting up audio cables.

Versions: Ø 4 mm gold-plated with solder posts

Rated voltage: 30VAC ~ 60VDC

Rated current: max. 19A
